3

## ABSTRACT

4	A system and method for object based delivery of on-
5	line courses and content. The system and method can be used,
6	for example, to develop instructional and educational content.
7	Information stored on the system may be searched and reused in
8	developing a new course. Alternatively, new content may be
9	created using the system. The system and method includes
0	administrative functions to monitor the development of content
1	and the efficient use of the system.
